universität innsbruck

Initial Presentation: Segfault Slayer

Name is work in progress

Schmölz Lukas, Schöpf Emanuel, Schweigl Dominik

Game Theme

Game Idea:

- Metroidvania-style 2D side-scroller
- Player fights programming concepts and bugs (mainly C++ related)
- Playful, Pixel-theme (e.g. ASCII-Art for textures)

Brainstorming Examples:

- Infinite loop for Boss
- Segmentation faults for ability
- C++ xvalues as enemies

Project Structure

Directory Layout:

- `assets/` - Images, audio, fonts
- `build/` - build
- `data/` - Maps, entities, animations
- `docs/` - documentations
- `saves/` - Game state savepoints
- `src/` - Game and engine code
  - `core/` - Main Game loop, Window Manager
  - `entities/` - Entity logic
  - `rendering/` - Rendering
  - `utils/` - Other helpers/Managers
  - `world/` - World building
- `tests/` - Unit and integration tests

Development Setup

Dev.-Stack:

- Must: git, cmake, clang-format, vcpkg
- CI
- 1 Windows & 2 Linux

Dependencies:

- SFML
- tilson
- spdlog / plog
- Catch2
- imgui (maybe)
- glaze (maybe)

Team Responsibilities

Task Distribution:

- Player movement & combat - Dominik
- Enemies & menus - Lukas
- Maps & saving - Emanuel
